SUMMARY

First-Class Computer Science graduate and independent developer building offline-first products across Android (Kotlin), Flutter, desktop (Tauri) and React, from problem research and scoping to tested builds. Available for freelance projects and graduate or junior engineering roles.

PROJECTS

CropCare — Offline crop-disease diagnosis app · Top 10, Ascentic AI Launchpad — In development

Flutter · TensorFlow Lite · Drift/SQLite · FastAPI · Supabase · Gemini API · github.com/raashidarq/cropcare

- Trained a MobileNetV3 classifier covering **34 categories across 6 crops** and shipped it on-device as a 6.06 MB TFLite model, so diagnosis works without connectivity.
- Flagged uncertain predictions with normalized Shannon entropy and confidence thresholds, and rejected unsuitable photos with blur, exposure and vegetation checks before inference.
- Built offline treatment guidance for 28 disease and pest categories in English, Sinhala and Tamil on a 14-table Drift schema, backed by 227 automated tests including localization-parity checks.
- Made Gemini recommendations opt-in and cached, avoiding repeat API requests and a lifecycle crash caused by automatic calls.

Tally — Local-first desktop productivity app — In development

Tauri v2 (Rust) · React 19 · TypeScript · Dexie/IndexedDB · Vitest · Playwright · Product page

- Built a desktop app unifying habits, tasks, focus timing, journaling and energy tracking; no account, and a content security policy blocks all external connections.
- Chose Tauri over Electron for a ~2.5 MB Windows installer; the Rust shell handles the tray, a global quick-capture shortcut, a mini timer window and single-instance behaviour.
- Split 7 features into modules with lint-enforced import boundaries; tested with 73 unit test files, 24 Playwright end-to-end specs (with axe accessibility checks) and versioned-migration tests.

KeepClose — Encrypted, offline relationship-memory app for Android — In development

Kotlin · Jetpack Compose · Room · SQLCipher · Vosk · Product page

- Modelled relationships as a directional graph that explains indirect links in plain language (“your mother’s cousin”) and renders a family tree.
- Kept all data on the device: SQLCipher-encrypted database with Keystore-backed keys, on-device speech-to-text via Vosk, and no Internet permission.
- Built CSV import with field mapping and duplicate review, selective CSV export, and full ZIP backup.

SmartDrive — Driving-school management system (final-year project) — 2024 – 2025

React · Supabase · Tailwind CSS · Live demo

- Built role-based dashboards for students, instructors and administrators (scheduling, learning progress, fleet management) with Supabase email authentication and a no-account public demo mode.

PROGRAMMES & AWARDS

Ascentic AI Launchpad — Finalist, Top 10 — Sep 2026

Eight-week mentored programme; took CropCare from problem research to a working MVP and presented it at TRACE, Sri Lanka.

ESOFT Intercampus Hackathon — Software Engineering category winner — Oct 2023

Team of five; led user research and built the Figma prototype for eHab, a mental-health support app.

EDUCATION

BSc (Hons) Computer Science — First Class — Sep 2025

Kingston University (UK), delivered at ESOFT Metro Campus, Sri Lanka

Postgraduate Diploma in Professional Marketing (Level 7) — Merit — Mar 2024

Chartered Institute of Marketing (CIM), studied at SLIM, a CIM Accredited Study Centre. **Distinctions** in Innovation in Marketing and Corporate Digital Communications (Certificates of Excellence, Dec 2023 exams).

SKILLS

Languages	Kotlin, TypeScript, JavaScript, Dart, Python, SQL, Rust (Tauri)
Mobile & desktop	Jetpack Compose, Room, Flutter, Tauri
Web & backend	React, Astro, Node.js/Express, FastAPI, Tailwind CSS
Data & ML	TensorFlow Lite, Supabase/PostgreSQL, SQLite, IndexedDB, Gemini API
Testing & tools	Vitest, Playwright, Git, GitHub Actions, Figma
